1. 2:1 Synchro Tilt

Passive synchro-tilt motion allows the back to recline at a 2-to-1 ratio to seat angle. For every 2 degrees of back recline the seat tilts 1 degree, opening the angle of the torso, increasing circulation to the legs, and improving spinal alignment. This feature allows users to maintain proper lower body and lumbar support throughout the recline motion.

4. Built-In Lumbar Support

Impact Series' contoured mesh back contains built-in lumbar support that follows the natural curve of the lower back. This allows the user to sit up straight with the head, spine, and pelvis in alignment, reducing pressure placed on the lumbar discs.

2. Seat Height Adjustment

Pneumatic seat height control allows a seat's height to be increased or decreased to accommodate individual preferences. Using a chair at an appropriate seated height helps keep feet supported and comfortable at an ergonomically ideal angle and prevents lower back discomfort.

5. Arm Pad Adjustment

Impact Series task chairs include a vertical arm adjustment feature that helps reduce stress to the spine, upper back, neck, and shoulders. Impact Series arm pads are adjustable for optimal comfort.

3. Breathable Mesh Back

When sitting in any space for a prolonged period of time, it is essential to ensure healthy circulation. Impact Series chairs contain a breathable mesh back that contours to the user's body while simultaneously allowing for excellent airflow.

6. Standard Mesh Fabric Seat

Impact Series chairs are standard with a breathable mesh fabric seat, allowing for comfort, style, and airflow. The superior ventilation of the mesh seat allows the Impact Series to perform well in a variety of climates. Impact Series mesh seats are well padded for enhanced comfort and durability.
