

KOLBY™

HIGH PERFORMANCE SEATING

1. LUMBAR SUPPORT

Adjustable lumbar support can be lowered or raised to target a precise area of the back and help alleviate stress to the vertebrae.

2. WATERFALL SEAT

The molded CFC free seat features a slight front waterfall design offering increased comfort and improved circulation.

3. TENSION ADJUSTMENT

Adjust the tension to match your body's height and weight. A chair set to the proper tension reclines smoothly allowing the user to change positions easily and provides increased circulation.

4. PNEUMATIC LIFT

Raise or lower the seat of chair to the ideal height to help keep your feet supported, minimizing the pressure placed under the knees and thighs.

BACK ACCENT TRIMS

The back frame is available with a choice of two accent strip finishes.

Black Accent Trim

Chrome Accent Trim

5-PRONG BASE

5-prong base is standard with hard dual wheel casters and is available in two finishes.

Black Nylon Base

Polished Aluminum Base

5. BREATHABLE MESH

The breathable stretch mesh back offers comfort, continuous support and increased airflow.

6. 3D ARMREST

Armrests are adjustable in three dimensions to help relieve loads on the neck, shoulders, arms and back. 3D adjustable arm pads move backwards, forwards and pivot along their axis.

7. TILT LOCK

The back can be locked in one of four positions or be set to the free float feature which allows the chair to tilt freely.

8. SEAT SLIDER

Adjust the distance between the seat and chair back to help accommodate the length of your legs, maintain good posture, and relieve pressure from the back of the knees.

9. SYNCHRONOUS CONTROL

For every 2° of back recline, the seat angle tilts 1° (2:1 ratio) as you lean back, opening the angle of the torso, increasing circulation to the legs, and improving spinal alignment.
