

**PULSE™**  
**DIGITAL LOCK**

## PULSE™ DIGITAL LOCK

### The ideal solution for the evolving workplace.

PULSE digital is a slim profile electronic lock designed for use on a variety of storage solutions including lockers, pedestals, filing drawers, desks, and a variety of multi-use cabinets. The PULSE digital lock is the perfect solution for the modern workspace, offering a more flexible approach to the utilization of space. With the ability switch between public or private use modes, employers can deploy and reconfigure spaces to accommodate numerous types of work settings, such as hoteling, benching, semi-private, or executive space.

PULSE, a simple and flexible security solution.

- Personal code of 4 to 15 digits: more than 1 billion password combinations available.
- Touch screen operation with audible indicators.
- Two user modes available: public and private.
- Auto alarm function.
- Fake pin anti-theft technology.
- Battery operated with 5000 time lifespan.
- Optional master key for password reset management.

#### PRIVATE MODE

In private mode, the lock functions for assigned use and contain a fixed user defined password.

#### PUBLIC MODE

In public mode, the lock functions for shared spaces and the password combination automatically resets after each use.

#### ANTI-THEFT TECHNOLOGY

When activated, the fake pin anti-theft option allows users to input any code before or after their password to help prevent a lock from being compromised.
