RESOLUTION FOR COMMON PROBLEMS

Problem	Primary Cause	How to Solve the Problem
When inputting the password, the alarm beeps twice..di..di, while lights up.	Battery voltage is too low	Replace Battery
When inputting the password, the alarm beeps once..di..while lights up, and the lock cannot be opened.	Knob is not in the correct position	Turn the knob to the correct position

ADDITIONAL INFORMATION

1. When a password has been forgotten, and you do not have a master key, you can contact OFGO STUDIO at service@ofgo.com for assistance.

2. The lock contains optional Fake Pin anti-theft technology. This technology allows you to input any code(s) before or after your real password to prevent your real password from being comprimised. A maximum total of 16 digits can be entered, including your real password.

3. If an incorrect password is entered in 4 times an alarm will sound and the lock will be dead for 60 seconds.

4. The lock contains an automatic power shortage prompt. When the lock shows this signal , it is low on battery. When the voltage is very low the lock cannot be operated.
