

**SURFACE+™** is a decorative thermofused surface panel which is non-porous, making it an inhospitable environment for microorganisms to grow and live. SURFACE+ TFL panels have been tested by a third-party laboratory according to ISO 22196: 2011 standards and were proven to be compliant with the Japanese JIS Z2801: 2012 standard for antimicrobial activity and effectiveness in not promoting bacterial growth.

Demonstrated to reduce 99.9% of the bacteria tested (*Escherichia coli* ATCC 8739, *Staphylococcus aureus* ATCC 6538), SURFACE+ thermofused panels exhibit strong biocidal properties.

SURFACE+ is available in 11 standard finishes and is ideal for high-touch applications where the surface is more likely to be exposed to microorganisms.

**IMPORTANT NOTE CONCERNING COVID-19**

SURFACE+ thermofused laminate surfaces are not anti-virus. The proven antimicrobial properties do not protect users from contamination of Covid-19 or other germs, bacteria or viruses. They do not serve as a substitute for disinfection with approved cleaning products.

**EASE OF MAINTENANCE**

Tested in accordance to BIFMA HCF 8.1 Health Care Furniture Design Guidelines for Cleanability.

DO NOT allow any cleaning product to sit for an extended time on the SURFACE+ surface or use a large amount of liquid as this may cause the material to swell. DO NOT use cleaning products containing wax, abrasives, acids strong alkaline bases, or sodium hypochlorite based products (like Clorox®) or any disinfectant that contains chloride, as well as steel wool or abrasive scouring pads. These products can cause irreversible damage to your decorative panel surfaces. For more information visit our care and maintenance guide.
